INCIDENT REPORT IR-2025-004

Water Main Break, Alder Street between 4th and 6th Avenues

Date: Monday, 3 February 2025
Prepared by: Tomás Ibarra, Operations Superintendent
Report date: 10 February 2025
Asset: 8-inch cast-iron main, installed 1968 (asset ID DM-0412)

1. Summary

A circumferential break on the 8-inch cast-iron main under Alder Street caused a loss of pressure for **214 customers**. Service was restored after about eleven hours. A boil-water advisory was issued for the affected area and lifted on 6 February 2025 after two consecutive days of negative bacteriological samples. No illness was reported.

2. Timeline

Time	Event
05:42	Resident reports water running in the street (after-hours line)
06:05	On-call crew arrives; break confirmed near 412 Alder Street
07:15	Four valves closed; section isolated; 214 customers without water
08:30	Boil-water advisory issued by SMS, website and door hangers (Memo No. 2024-22)
13:20	Six feet of main replaced with ductile iron pipe and two couplings
16:45	Section flushed and returned to service
4–5 Feb	Samples at three locations each day: all negative
6 Feb, 10:00	Advisory lifted with the General Manager's approval

3. Cost

Item	Amount
Crew labor and overtime	\$14,920
Pipe, couplings and materials	\$6,340
Excavation and road restoration (contracted)	\$15,200

Laboratory testing and notices	\$2,300
Total	\$38,760

4. Cause and recommendations

The main failed from external corrosion, made worse by frost loading. It is the third break on cast-iron mains from the 1960s in two years. The Operations Department recommends:

1. an accelerated program to replace the remaining cast-iron mains (about 6.8 miles), starting in FY2026;
2. adding two isolation valves on Alder Street so a future break affects fewer customers; and
3. a second after-hours crew member during January and February.
